# Work safety on construction sites in Finland

- Larger companies have strict rules and supervision.
- Small and medium size enterprises have more problems.
- Based on real-life knowledge from on-site managers: on-site managers have to supervise workers constantly in all companies.
- On-site manager has legally a personal responsibility of taking care of work safety on his site.
  
- Problems: attitudes, cultural differences, language barriers....

# Aspects affecting work safety

There are several situational things that effect the efficiency of the training and the implementation of the work safety regulations and practices.

- 1) organizational culture, which is formed mostly by the top management
- 2) employees individual psychological and cultural aspects
- 3) availability of experience-based, individualized training, which has more versatile possibilities for long-term learning and competence-building than traditional class-room or written material-based learning.

# Objectives

Based on these recognized challenges, the specific objective of this project is to improve work safety competence in construction industry in the cross-border area.

This will increase the productivity of the industry, as well as reduce social costs and human suffering.

This will be done by:

- 1) Creating possibilities for widening top management's perspective of work safety and its influence on different factors.
- 2) Improving the interaction skills of on-site managers and work safety experts in the companies.
- 3) Creating a strategy for implementing work safety training in a physical, interactive training environment.
- 4) Ensuring the implementation of the project outputs and further development in improving work safety competence on construction sites, considering different target groups.

# Target groups

The main target groups and beneficiaries of the project are, in order of relevance

- 1) construction site workers, especially those who have high risk factors for accidents, such as young or old workers or workers from different cultural background
- 2) construction site managers and work-safety experts in the companies
- 3) construction students, both vocational and higher education students
- 4) top management of construction companies within the cross-border area.

The target organizations are

- 1) construction companies within the cross-border area
- 2) interest organizations - NGOs, committees and associations - in the field of construction industry, work safety and labor and employer interest organizations.
- 3) specific vocational education organizations.

# Activities

All activities require the involvement from both Finnish and Russian partners. There are four main activities.

**1 (Productivity):** The main output will be work safety competence guidelines for top management.

**2 (Competence):** The main outputs will be a cultural-sensitive monitoring methodology for work safety competence evaluation, as well as basic assumptions for a pilot training package.

**3 (Practice):** The implementation of the new training environment in St. Petersburg and piloting an installation model and a training package.

**4) (Continuance)** is about collecting and distributing the results to different stakeholder groups with face-to-face-meetings and a seminar.
